BACKGROUND OF THE INVENTION.

Please amend the fifth paragraph on page 3 as follows:

A cross-bar controller is provided for efficient allocation of the bandwidth across the cross-bar. It calculates the rates that each ingress means must transmit to each egress means. This is the same as the rate at which data must be transmitted from each packet queue. The calculation makes use of real-time information, including traffic measurements and indications from the ingress means. The indications from the ingress means include monitoring the current rates, queue lengths and buffer full flags. The details of the calculation are discussed ~~more rigorously~~ in the, copending UK Patent Application Number 9907313.2 ~~docket number F21558/98P4863~~).

Page 4, between lines 10 and 11, insert the following heading:
